

Dear Hiring Managers

I am writing to express my strong interests towards the Graduate Engineer Position at Industrious Engineering. As a final-year Mechanical and Mechatronics student at UTS, I am excited about the prospect of contributing to a forward-thinking consultancy delivering impactful projects across Australia.

A commitment to ethical conduct and the highest standards of professional accountability

Throughout my career, I've developed strong commitments to ethical conduct and professional accountability (3.1). Throughout my time at All-Systems Electronics, I've consistently adhered to IPC-A-610 standards throughout the inspection, soldering and testing processes. Ensuring quality, safety, and reliability in all aspects and enforcing the importance of integrity and precision within professional practices.

Demonstrated ability to effectively communicate with other engineers and with stakeholders from different fields.

I've demonstrated effective communication skills towards both technical and non-technical stakeholders (3.2). I've collaborated and lead in many studio-based engineering subjects, a recent project, *The Smart Toaster*, involved a paying-client and a small team of engineering students. As team leader, I formed most of our sprint reviews with the technical staff and reviewers. On the non-technical side, I prepared and ran weekly meetings with our client. I ended up receiving *High Distinction*. Additionally, throughout my work experiences I've communicated with team members and completed client-based work with success.

The ability to engage with a creative, innovative and proactive environment.

I thrive in creative and innovative environments (3.3), as showcased throughout many projects such as the Warman Challenge Robot, Step-Tracker, Solar BBQ and PCB Automation through Robotics Simulation. These prompts required deep problem-solving and iterative design thinking, which I worked through using strategies such as morph tables, subsystem analysis and the APAP^3D procedure model. Once prototyped, I showed ability to adapt depending on certain outcomes, and ended securing high scores for all projects.

Demonstrated ability to use and manage information.

My ability to use and manage information effectively (3.4) was significantly developed through my time at Smart MCs, a start-up company based on producing special carriers which optimise production spaces significantly and promote cell culturing. In the nature of the work, it was very innovative and niche, and my contract required signing an NDA. Managing and using information effectively here was crucial for the company's

success, and I contributed to improving QCs and suggesting/creating new ones along with documenting experiments and results.

The ability to manage your own performance in a professional environment.

I take pride in managing my own performance in professional environments (3.5), upholding a distinction-level WAM whilst working part-time. I dedicate time and effort towards everything I partake in professionally, whether it's at university or within the workfield, I ensure the two are treated separately with high-performance in both.

The ability to manage your own performance in a professional environment.

Lastly, I showcase strong abilities to work collaboratively and demonstrate leadership (3.6). In both the academic and workplace setting, I've contributed to team success and leadership, supporting peers and ensuring projects progress accordingly. Achieving High Distinctions throughout a range of projects.

Thank you for considering my application. I would like to welcome you to further inquire and for us to discuss how my skills and experience align with your incredible graduate program. I am available at your convenience for an interview.

Kind regards,

Ben Harrison
